

Execute Script or Process on List of Agents

Wednesday, December 10, 2014

3:36 PM

Theory

Script is designed to run a script or scripts against a list systems in a consecutive order.

Instructions

1. Recommended to copy the snippet 'Snippet - Execute Script or Process on List of Servers' and change the name to something related/specific to the action it's performing or script it's executing.
2. Replace the value for @ListOfComputers@ variable (on the very first line) of the 'Snippet - Execute Script or Process on List of Servers' (or the copied script) script with the list of computer IDs to execute script.
 - a. Script will execute the script on the list computers in order.
3. Line 13 is the line to replace with the script to be execute on each of the computers.

Requirements

1. N/A.

Installation

1. Import the 'Snippet - Execute Script or Process on List of Servers' XML file in to LabTech.
2. Look for the 'Snippet - Execute Script or Process on List of Servers' script then move the script to the desired script folder.

Itemize Inventory

LabTech Items

1. LT Scripts:
 - a. Snippet - Execute Script or Process on List of Servers
 - i. Location: Scripts > ServicePlus > Snippet > Snippet - Reboot list of Servers
 - ii. This the script that will loop through a list of computers IDs and call the custom script the server.

Change Log
